

Emmanuel Ayo

NETWORK SECURITY ENGINEER

Atlanta, GA • (770) 688-0775 • ea100.pro@gmail.com • linkedin.com/in/eayo100

SUMMARY

Network Security Engineer with 6+ years across enterprise network and security operations, specializing in firewall policy, network segmentation, and least-privilege access control at global scale. Hands-on with Palo Alto, Cisco FMC/CSM, AlgoSec, Splunk, and ServiceNow supporting 1,000+ enterprise services. M.S. in Information Technology; Microsoft Azure (AZ-900) certified and CompTIA Security+ in progress.

CERTIFICATIONS

Certified: CompTIA Security + (SY0-701) • Microsoft Azure Fundamentals (AZ-900)

In Progress: Target Q3 2026 • (ISC)² CISSP — exam scheduled

TECHNICAL SKILLS

Network Security: Firewall policy & rule lifecycle (ACLs, NAT, object groups), network segmentation, least-privilege access, zero-trust principles, audit & compliance attestation

Security Platforms: Palo Alto, Cisco FMC/CSM, AlgoSec, Splunk, LiveNX, Wireshark, ServiceNow, Infoblox (DDI)

Networking: BGP, OSPF, EIGRP, DNS/DHCP/IPAM, VPN, MPLS, STP, VLANs, F5 load balancing, TACACS

Cloud & Automation: AWS, Azure, Python, REST APIs

Systems: Windows Server, Active Directory, Linux

PROFESSIONAL EXPERIENCE

General Motors

Oct 2024 – Jan 2026

Network Security Engineer, Global Network Security — Atlanta, GA

- Engineered, deployed, and validated firewall policy changes across Production, DMZ, and Cloud environments (Palo Alto, Cisco FMC/CSM), supporting 1,000+ enterprise services with near-zero downtime.
- Optimized 50+ firewall rules weekly (ACLs, NAT, object groups), enforcing segmentation controls and aligning to data-protection standards to reduce enterprise risk.
- Managed full firewall rule lifecycle — creation, modification, decommission, and compliance attestation — via AlgoSec and ServiceNow, ensuring audit readiness and least-privilege enforcement.
- Partnered with application owners to translate business requirements into firewall logic, accelerating approval SLAs while tightening access-control posture for onboarding requests.
- Detected and mitigated network security anomalies using Splunk and LiveNX, resolving misrouted traffic, stale NAT/ARP, and vPC gaps to reduce service-disruption risk.
- Collaborated with GM's enterprise cybersecurity teams on risk management, compliance, and incident response, providing network-security guidance to identify, mitigate, and remediate risk across global connectivity.

General Motors

Jun 2022 – Oct 2024

Network Engineer, Core Production Health — Atlanta, GA

- Led triage and resolution of 10–20+ weekly network/security incidents across firewall, proxy, and load-balancing layers; monitored health via BGP and telemetry across high-availability environments with 1,000+ endpoints.
- Automated network operations with Python and REST APIs, reducing manual configuration errors and improving control consistency across environments.
- Administered Infoblox (DDI: DNS, DHCP, IPAM) across large-scale segmented networks; performed deep packet analysis (Wireshark) to accelerate root-cause identification.

Aston Technologies

Jul 2021 – Dec 2021

Junior Network Engineer (Contract) — Minneapolis, MN

- Deployed 10+ enterprise networks (OSPF, EIGRP, BGP, VLANs); built Cisco labs to validate CCNA/CCNP-level technologies and supported vendor evaluation and compliance efforts.

TES-AMM USA

April 2019 – Apr 2021

IT Support Specialist — Atlanta, GA / Los Angeles, CA

- Built AWS-based diagnostics for shipped hardware at scale — pulled logs from S3, spun up Linux EC2 instances for environment replication, and monitored 200+ remote endpoints via CloudWatch with automated fault alerting.
- Administered Windows Server and Active Directory, enforcing access controls for critical SCADA/GIS infrastructure; led IT compliance audits and ran security best-practice workshops for 40+ staff.

EDUCATION

Kennesaw State University — M.S., Information Technology (Data Analytics)

May 2023

The University of Georgia — B.S., Biology & Data Science

May 2019

HIGHLIGHTS KSU Computing Showcase Grand Prize (2023) — AI/ML quantitative-trading capstone (Python, scikit-learn)

- UGA Best Programmer — 1st place out of 900 contestants • APWA Georgia Scholarship Recipient
